

# CORONAVIRUS

## INFORMATION & PLANNING

### ADVISORY SERVICE

Our medical and security specialists have extensive experience supporting clients in previous infectious disease outbreaks and continue to be on-the-ground providing accurate information on how to mitigate risks and ensure business continuity. Aimed to address your organisation's unique challenges, our Coronavirus Information & Planning Advisory Service (C-IPAS) has been designed exactly to respond to global threats like the coronavirus disease (COVID-19) outbreak. C-IPAS offers 4 key features to help your organisation:

#### C-IPAS provides:

**2 days expert medical advisory** - Provides access to an International SOS subject matter expert to advise on your pandemic planning and assessment to improve on existing systems. Also, to help customise and implement the incident monitoring and pandemic resources into your organisation's plan.

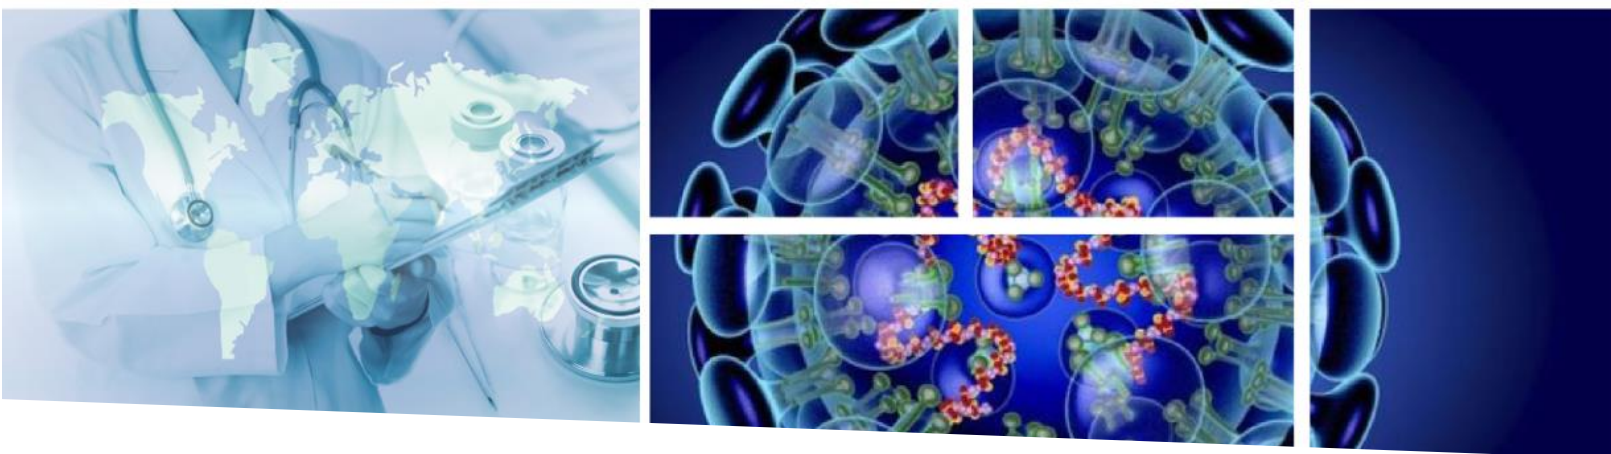

**On-going incident monitoring** - Provides access to detailed status and advice on COVID-19 and other pandemic threats. Your assets such as work locations or communities are mapped against COVID-19. Users can turn on email alerts for threat exposure.

**Manager to-do lists (playbooks) for multiple scenarios on COVID-19** - Includes pre-scripted and customisable communications, posters, procedures, presentations, planning tools and other resources.

**Medical content kept up to date as situations change** - In an evolving outbreak, plan modifications will be required as new information becomes available. Infectious disease specialists maintain the content, so your team can focus on business operations.
